

Preamble

Note that `babel` needs to be included *after* `fontenc` in order for rare letters like Yatz, Izhitza and Fita to be available (I have no clue why):

```
\usepackage[OT2,T1]{fontenc}  
\usepackage[russian,british]{babel}
```

or

```
\usepackage[T2A,OT1]{fontenc}  
\usepackage[ot2enc]{inputenc}  
\usepackage[russian,british]{babel}
```
